ShortlistPrep

STAKEHOLDER PRESENTATION

From resume to offer letter, with AI

One platform that takes a job seeker from an ATS-ready resume, through the right openings, to interview practice and live interview support.

THE PROBLEM

Job seekers lose offers long before the interview

1

Resumes get filtered out

Most large employers use ATS software. A resume that is not written for it is rejected before a person reads it.

2

Job search is noisy

Generic job boards show the same IT roles to everyone. A plant biotechnologist or a teacher scrolls through jobs that are not theirs.

3

Interviews are under-prepared

Candidates do not know their gaps for a role, stretch the truth in "Tell me about yourself", and freeze on follow-up questions.

Today these are solved by separate tools, or not at all: a resume checker here, a job board there, a coach for a fee that many cannot afford.

THE SOLUTION

One journey, seven steps, one account

1. **ATS resume check and rewrite**
2. **Role-based resumes and cover letters**
3. **AI job search on real company career sites**
4. **Skill Gap Matrix and Insight for each job**
5. **Interview coaching with model answers**
6. **"Tell me about yourself" coach**
7. **Live interview support on the desktop**

The difference

Everything is built on the candidate's own resume and profile. The AI uses their facts, and where it cannot find a fact in the resume it says so, instead of inventing one.

PRODUCT · AI JOB SEARCH

Relevant jobs for every field, not only IT

- Reads live openings straight from employers' career sites, so listings are real and current
- The candidate chooses a **sector** once; the search then picks the right employers for that field
- The AI scores every job against the resume and groups them: high, medium and stretch probability
- Each job gets a **Skill Gap Matrix**: what matches, what is partial, what is missing, and a plan to close the gap

Why it matters

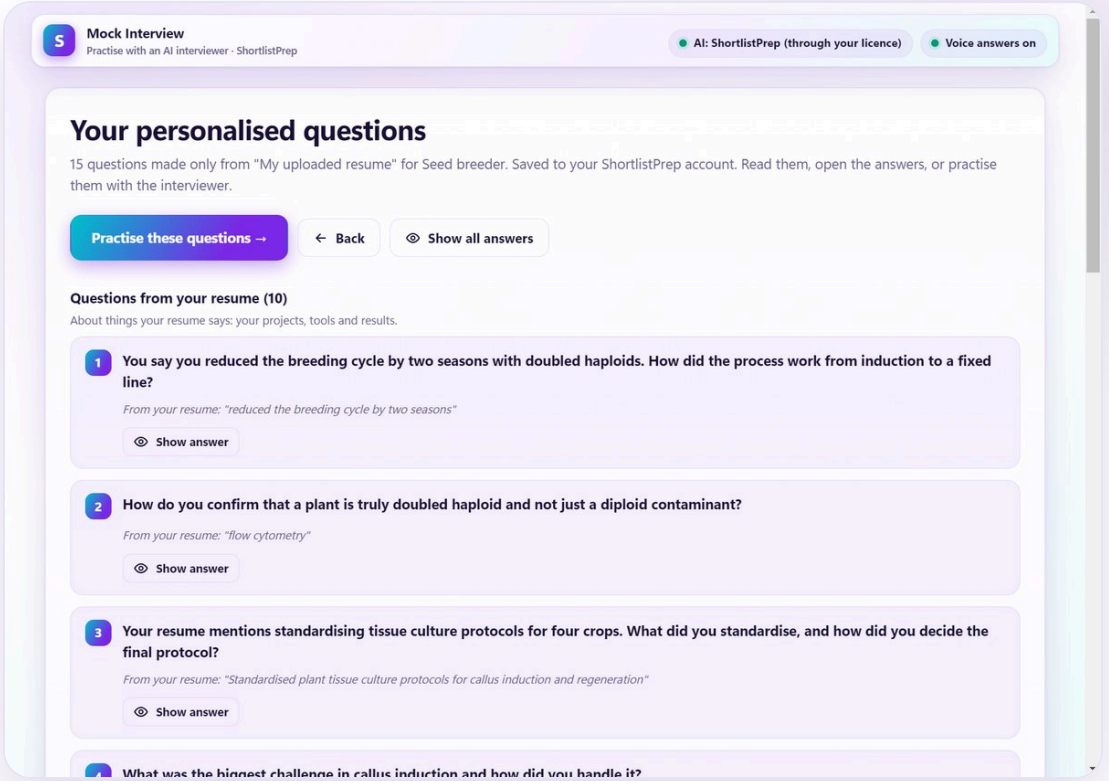

A candidate in agriculture, healthcare, teaching or finance gets jobs from their own industry. General job boards and many AI tools lean heavily towards technology roles.

Agriculture | Healthcare | Education | Finance | IT | and more

PRODUCT · INTERVIEW COACHING

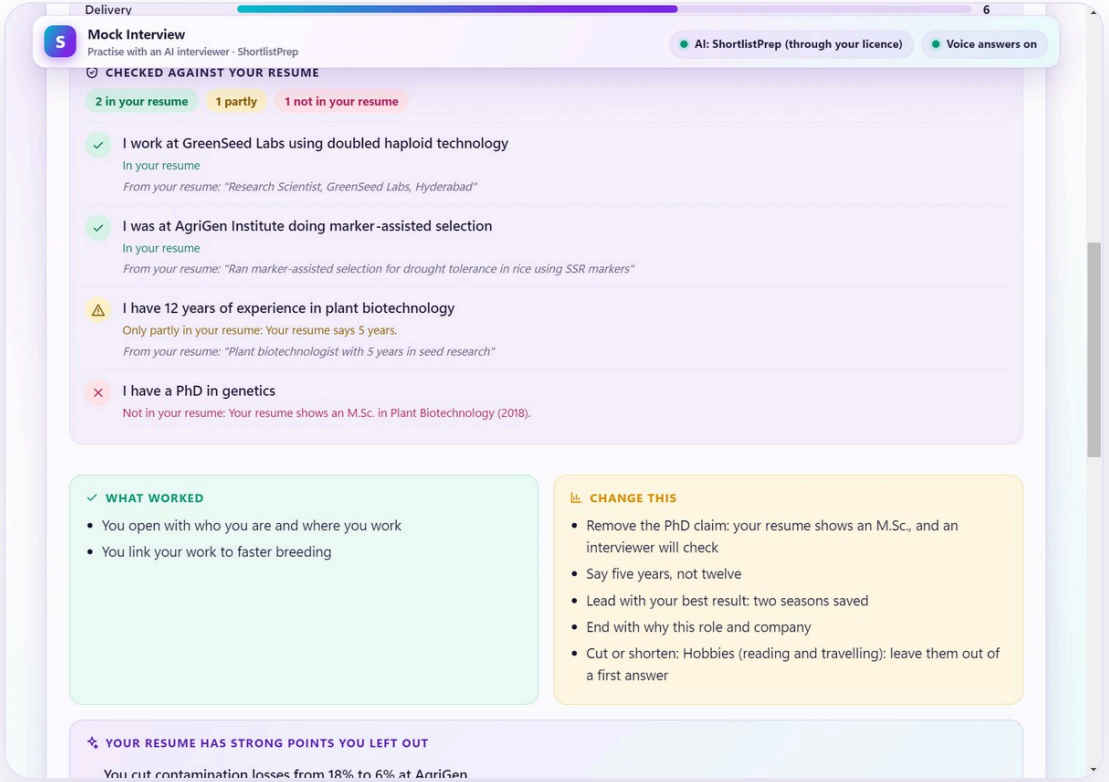

Practice questions made from your own resume

- Personalised questions built from the candidate's resume, plus scenario questions for the role
- A model answer and talking points for every question, with a Show answer button
- Mock interview in the desktop app with spoken or typed answers and a score for each answer
- The same questions appear in My account and in the support team's dashboard

PRODUCT · NEW

"Tell me about yourself", checked against the resume

- Every claim in the candidate's answer is marked: in the resume, only partly, or not in the resume
- Clear changes: what worked, what to cut, strong results the resume has that were left out
- A more impressive version and 6 to 8 personalised talking points, built only from real facts

Honest by design. Candidates stop over-claiming, and interviewers see consistent stories.

PRODUCT · DESKTOP APP

Live interview support, with licence and privacy built in

Live Class and interview assistant

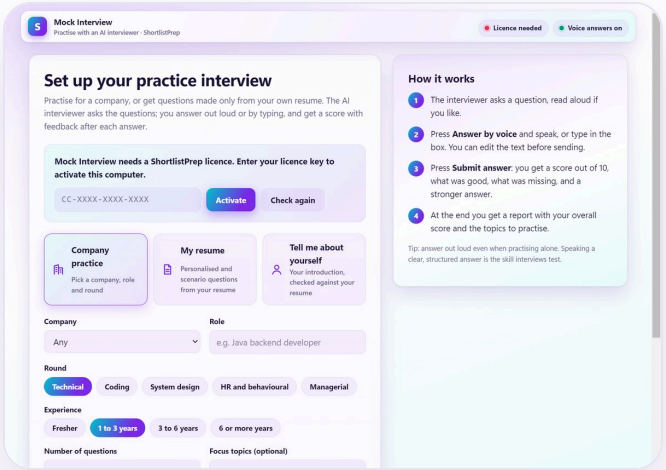

A Windows desktop app that listens to a question and shows a suggested answer in real time, fitted to the candidate's topics and resume.

Licence and devices

Signed licences, a limit on computers per licence, trial and paid plans, and activation checked with our server.

Candidate data stays theirs

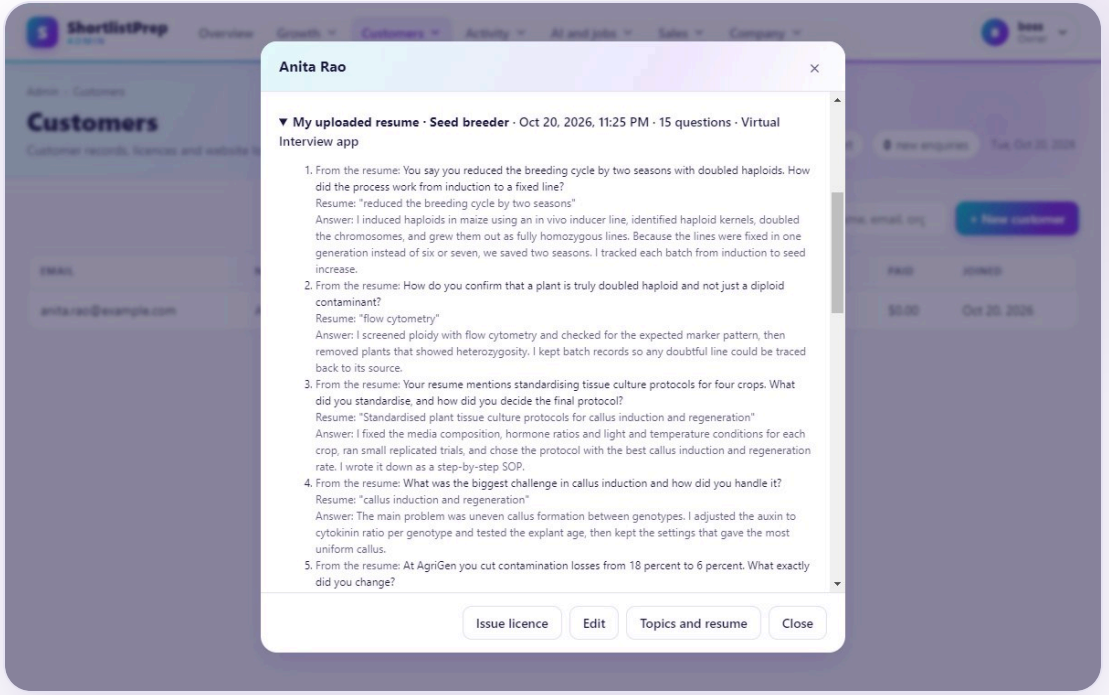

Resume text is used only to personalise their own answers. AI calls go through our server, so customers never handle API keys.

PLATFORM

A complete business back office

- **Admin dashboard:** customers, candidates, licences, orders, support and an audit log
- **Pricing and plans:** plans, offers and limits set by the team, with no code change
- **AI cost control:** a daily token allowance per customer, extra token packs, and every AI call metered
- **Candidate view:** My account shows the plan, usage against limits, licences and interview history
- **Payments:** UPI and bank transfer today; online gateways are plugged in when connected

BUSINESS MODEL

Simple plans in rupees, tied to real usage

Free

₹0

1 ATS check and improved resume, 1 role-based resume, 2 AI job searches a month, Skill Gap Matrix on every job.

Shortlist Pass

₹299 / 30 days

Unlimited ATS checks (fair use), up to 8 role-based resumes, cover letters, about 30 AI job searches and Insights.

Interview Pass Most popular

₹599 / 30 days

Everything above plus interview coaching, the question bank with model answers, the introduction coach and a bigger AI allowance.

Revenue levers

Plan subscriptions · token packs for heavy users · 90-day and Offer passes with live interview support · institutions and training partners.

Cost discipline

Every plan sets a daily AI token cap, so the cost of each customer is known and bounded from day one.

Prices include GST · shown as configured today; the team can change them from the dashboard

WHY WE WIN

What is hard to copy

Truthful by design

Claims are checked against the resume, quotes must exist in it, and numbers that are not in it are flagged. Candidates trust the output.

Built for every sector

Sector-aware job search and questions, not a technology-only tool.

End to end, one account

Resume, jobs, gaps, practice and live support share one profile, so each step makes the next better.

Priced for India

Rupee plans from ₹0 to ₹599 a month, UPI payments, and a free tier that shows real value first.

ROADMAP · PROPOSED

Where seed funding takes us next

Now

- Platform live: website, My account, admin, licences, plans
- AI job search, Insight, interview and introduction coaches

Next

- Online payment gateway and automatic plan start
- More employers and sectors in job search
- Offer Pass: live interview support sessions

Later

- Mobile experience
- Institution and campus partnerships
- Regional languages

Roadmap items are plans, not commitments

WHERE WE ARE AND WHAT WE NEED

Thank you

Status

- Product built and running with real customers
- Admin, plans, payments flow and AI metering in place
- Website with signup, pricing, career toolkit and account

Add before presenting

Customers and revenue to date · funding amount and use of funds · team · timeline for the next milestones. Edit **docs/presentation/deck.html** and render again.
